

# MACHINERY STORAGE

## Protect Your Equipment

Keeping your equipment under cover protects it from the elements, corrosion, and other concerns to ensure your operation runs smoothly. We help you customize reliable, long-term storage. With an open interior, our fabric covered buildings provide a solution designed to house machines of nearly any shape or size.

## OUR FABRIC BUILDINGS MEET ALL YOUR NEEDS

### FLEXIBLE DESIGN

We work with you to design and construct a practical and efficient solution for storing your investments. Choose from multiple building profiles and foundations. Customize your building even further with keder or monolithic covers, along with custom doors, openings, endwall designs and more.

### DURABLE CONSTRUCTION

Our buildings are designed to withstand weather conditions specific to your location. Our fabric is made to withstand the elements. Our well-trained crews pay attention to the details so the end product is a durable, long-lasting structure.

### NATURAL PROTECTION

With our construction materials and designs, natural airflow and ventilation minimize moisture. This protects your equipment from corrosion and other concerns while still guarding against the elements.

### ENERGY-EFFICIENT PROPERTIES

Our fabric allows natural light inside your building to provide the necessary lighting without the extra cost. Our fabric naturally helps maintain stable temperatures inside your building through the seasonal temperature changes.

### OPEN INTERIORS

Our fabric buildings are designed with height and open interiors to meet your storage needs. This feature gives you ample room to store your equipment as well as providing a protected environment to perform repairs and maintenance.

Morrill, KS (78x120)

## HEAR FROM OUR CUSTOMERS

"Greenfield Contractors recently installed a Fabric Building at our Jefferson City location. We had inspected various brands and even steel frame buildings and liked the frame quality and dome height of the solution Greenfield offered. We were very pleased with the high quality of construction and speed with which it was installed. The framing, bracing, and cover are very substantial and are worth paying for, especially in a high wind area. I would definitely recommend Greenfield for your next Fabric-Covered Building."

## WHY CHOOSE FABRIC?

### Natural Light

Fabric structures allow for increased natural light during peak daytime hours. Choosing our fabric-covered buildings nets significant savings for lighting, energy and heating costs.

### Thermally Conductive

Fabric has low thermal conductivity, minimizing the transfer of heat and cold compared to other standard construction materials. This means our fabric structures stay cooler on hot days and warmer in cold.

### Durable

Greenfield's fabric structure covers use high-density polyethylene tapes and UV inhibitors to increase their strength and minimize damage from sunlight exposure.

### Long-Lasting

The trusses of Greenfield's structures are hot dip galvanized for superior corrosion protection, preventing deterioration and increasing the longevity of your building.

### Versatile

Fabric structures are incredibly customizable and versatile. Our specially trained crews make building installations, updates, expansions, and relocations easy to implement.

## ENGINEERING BUILDINGS MADE TO LAST

Our buildings are engineered for each specific application to account for the wind (up to 150 mph) and snow loads (up to 300 psf). Our competitors offer buildings that can be installed anywhere and therefore are not engineered for the specific location.

Our cover material is manufactured from high density polyethylene tapes and coated on each side with low density polyethylene. The covers have UV inhibitors on each side to ensure long term strength when exposed to sunlight. Every project includes an up to 25 year fabric warranty.

Our buildings are engineered to comply with the latest IBC codes.
