Covered Load-Out: No

Covered Receiving: Yes

Truck Scale on Premises: No

Number of Operators Required: 2

Interior with fertilizer.

Partition Walls for Material Containment.

Alley and Declining Weight System.

Concrete Office and Load-Out.

“Greenfield Contractors completed the installation of our new dry fertilizer terminal in Hiawatha, KS, quickly and exceptionally well. The Calhoun Super Structure is a durable fabric structure that offers abundant natural light, and an open overhead space created by its free-spanning trusses, all at a much lower cost than a comparable wooden structure. This new facility has greatly benefited Ag Partners Co-Op by enabling us to handle significantly more products and increase our dry fertilizer output in a timely manner.”

BEN ZIMMERMAN, COO, *Ag Partners Co-Op*

“Calhoun Super Structure proudly collaborated with Greenfield Contractors to successfully install a 59,400 square-foot dry fertilizer terminal for Ag Partners Cooperative in Ellsworth, KS. Calhoun’s VP Series met their needs by providing expansive, unobstructed space for heavy equipment and storage capacity; hot-dipped galvanized corrosion-resistant frames; and natural light from the fabric to enhance the work environment. Additionally, we provided a CC Series 16- X 80-foot vehicle shelter to support their operation. This project exemplifies our commitment to quality, efficiency, and customer satisfaction.”

JASON ST. GEORGE, *Business Development Manager, Calhoun Super Structure Ltd.*

SERIOUS PROTECTION FOR SENSITIVE MATERIAL

When storing bulk fertilizer, you need more than a roof — you need proven protection. Calhoun's engineered fabric structures offer wide-span interiors, durable HDPE fabric, and corrosion-resistant steel frames to keep your product dry and operations efficient. Lower maintenance. Higher performance. Built to last.
